Leasing
2019

Financing

Converting to LED lighting is a beneficial investment for both individuals and commercial companies. But at Lumega, we know that a complete LED system can be somewhat expensive. Even though the return on investment time on LEDs is typically short, the size of the initial investment can be discouraging.

How to afford LEDs?

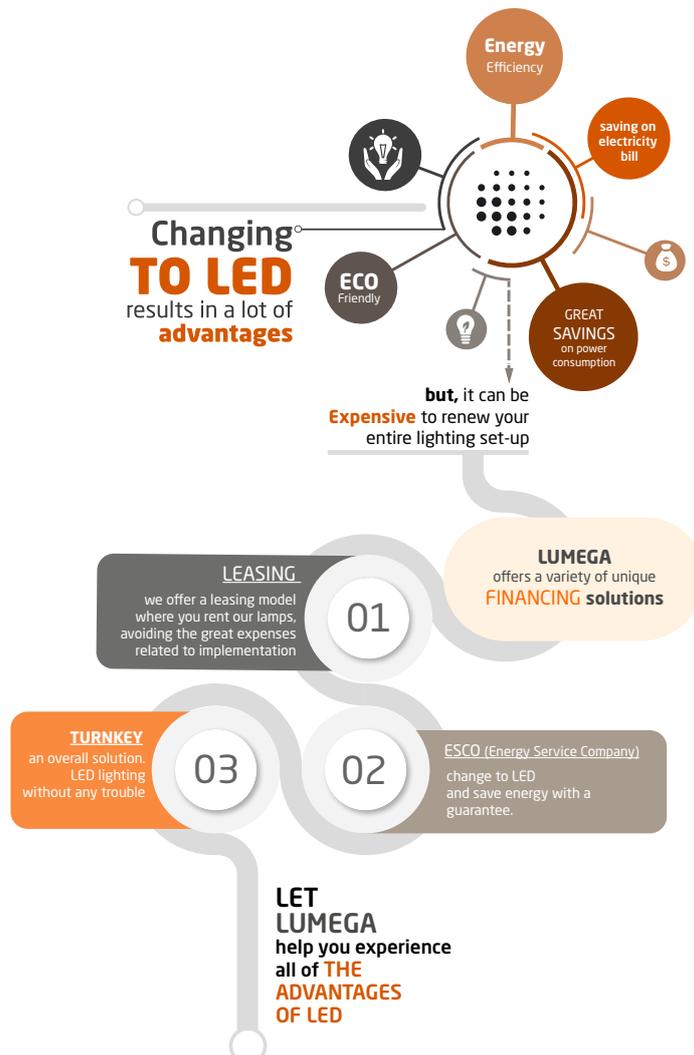

At Lumega, we believe that everybody has the right to have energy efficient LEDs of the highest possible quality! This is exactly why we offer you a range of finance options, which will enable you to afford an LED solution that benefits both our planet and your wallet.

In addition to offering a preferable option of leasing through our close collaboration with Jørgen Breinholt, one of the leading leasing experts in Denmark, we are also collaborating with EKF (Denmark's Official Export Credit Agency). The previously mentioned EKF is a government controlled and highly acknowledged credit agency, which allows us to offer finance options for large projects such as urban renewal projects, hotel construction etc.

We can, therefore, provide finance to any project regardless of the size or complexity, and therefore help you to obtain instant savings.

With a finance option from Lumega, we match the monthly payment with the energy savings provided by the LED system. The finance option, therefore, becomes a zero solution, as the monthly repayment equals the energy savings from the LED system.

When the investment is returned, and the LED system has saved you the equivalent of its value, you are left with 100 % of the savings directly from your bottom line. Whether you choose to save these or invest them elsewhere in your business, is completely up to you.

Leasing

Do you want to benefit from the many advantages of LED, but avoid the high expenses related to implementation? With a leasing agreement from Lumega, it is possible to receive this. At Lumega we believe that everybody has the right to a good working environment including healthy and efficient LED lighting.

How does LED leasing work?

If you wish to replace your existing lighting solution with LEDs, Lumega offers a leasing option where you lease our lamps. As a lessee of Lumegas LED solutions, you avoid numerous launching expenses such as the costs relating to lamp purchase and installation. You will still experience all the great advantages of LED which includes great energy savings and an improved quality of light.

When converting to LEDs the energy savings will often be so high that you are able to cover the monthly lease payment with your savings. Therefore an agreement as lessee can be extremely attractive to the customer who does not have enough capital to change the entire lighting solution but still wishes to experience the benefits of LED lighting.

We offer full implementation of the LED solution, which means you can enjoy all the LED advantages straight away without any inconvenience. When choosing the Lumega leasing option, you are ensured a secure collaboration with professional solutions. At Lumega, we have a close collaboration with Jørgen Breinholt, one of the most experienced specialists in the leasing industry. At Lumega, Jørgen Breinholt will contribute with his profound knowledge and expertise and thereby assure correct leasing agreements are prepared to conform to the current legislation.

The leasing agreement can advantageously be combined with our Turnkey solution, where Lumega manages the entire lighting solution and controls the maintenance. On agreement of a leasing agreement, you will be provided with a contact that can provide guidance in the event of any problems or questions.

LEASING MODEL		NS-ENERGY+	NS-ENERGY85	NS-ENERGY70
1	Procent financed	100%	85%	70%
2	Down payment	0%	15%	30%
